
APPENDIX F: TRACK INFO SERVICES ENVIRONMENTAL FIRSTSEARCH REPORTS SUMMARY

Environmental FirstSearch Report Summary

The TrackInfo Services regulatory database search results are summarized below. Hazardous materials sites identified within one quarter mile of the 230 kV transmission line and 69 kV subtransmission line components of the Proposed Project are listed in Tables 1, 2 and 3. Table 4 provides a list of sites identified within one quarter mile of the 230 kV transmission line component of the Van Buren Offset Alternative.

Overall, the majority of sites identified in the preliminary record search include SWL sites, RCRA generators, UST, and LUST sites associated with local businesses (e.g., gas stations, auto repair shops, supermarkets). Some of the materials would be considered hazardous if encountered by humans because they are flammable, carcinogenic, corrosive or reactive. A list of the regulatory agency databases searched by TrackInfo Services is provided in Table 3.2.7-1 (see Chapter 3). Details for each site are in the TrackInfo Services Environmental FirstSearch Reports at the pages referenced below.

Table 1. Sites Identified Near the 230kV Transmission Line Component of I-15 Route
